

# S@M ALERT!

## Safety Day 2019

# Safety @Mourik

## Talking about safety

*During our Safety Day we take time to discuss our essential safety rules. By applying these rules as standard, we can demonstrably reduce the consequences of incidents. It will make your workplace safer, and it will create job satisfaction and appreciation for workmanship.*

### What do we want to achieve with the essential rules?

You can't guarantee safety just by having good rules. We should use the rules as a tool rather than a means of control. Our essential rules are part of our workmanship and expertise and essential tools for every professional.

We want everyone to understand the rules and their purpose. By applying the essential rules every day, we can easily prevent serious incidents, such as those that occurred in the past. Everyone working at Mourik knows his trade and knows what could go wrong, and therefore also knows how to prevent accidents. Following the essential safety rules is part of this.

### Working together to make work more enjoyable!

We all perform best when we are free, to some extent, to plan our own work. However, this can never mean you don't need to follow the standard rules or stick to agreements made. What it does mean is: before starting each job, we discuss what needs to be done and how we are going to do it. Taking decisions together, dividing the tasks and agreeing on how to control risks forms the basis for job satisfaction for our people. This is the corporate culture we want and it fits in well with our entrepreneurial spirit. We say what we do and we do what we say. And if we think it could be done better, we speak up. Working safely, we do it together!

# S@M ALERT!

## Stay sharp!

Where safety is concerned, we must keep each other sharp. Not by checking on each other to see if the rules are being followed, but rather by knowing and understanding workplace risks and the measures we can take to control such risks. Our essential safety rules are measures to control risks. As a professional, you want to take these measures to guarantee safety, quality and cost control in projects.

Today, the key question we want to discuss with our coworkers is:

***How can we make sure that we WANT to observe the essential safety rules (even when no one is looking)?***

We would like to see your responses on [safety@mourik.com](mailto:safety@mourik.com). Let's decide together how we are going to deal with this and make it our own!

**Our solution is:**
